

**INSTITUTE OF MATHEMATICS AND
COMPUTER SCIENCE
UNIVERSITY OF SINDH , JAMSHORO**

NAME : MALIHA

DEPARTMENT : COMPUTER SCIENCE

SUBJECT : HCI AND COMPUTER GRAPHICS

PART III ROLL NO : 2K24/CSE/82

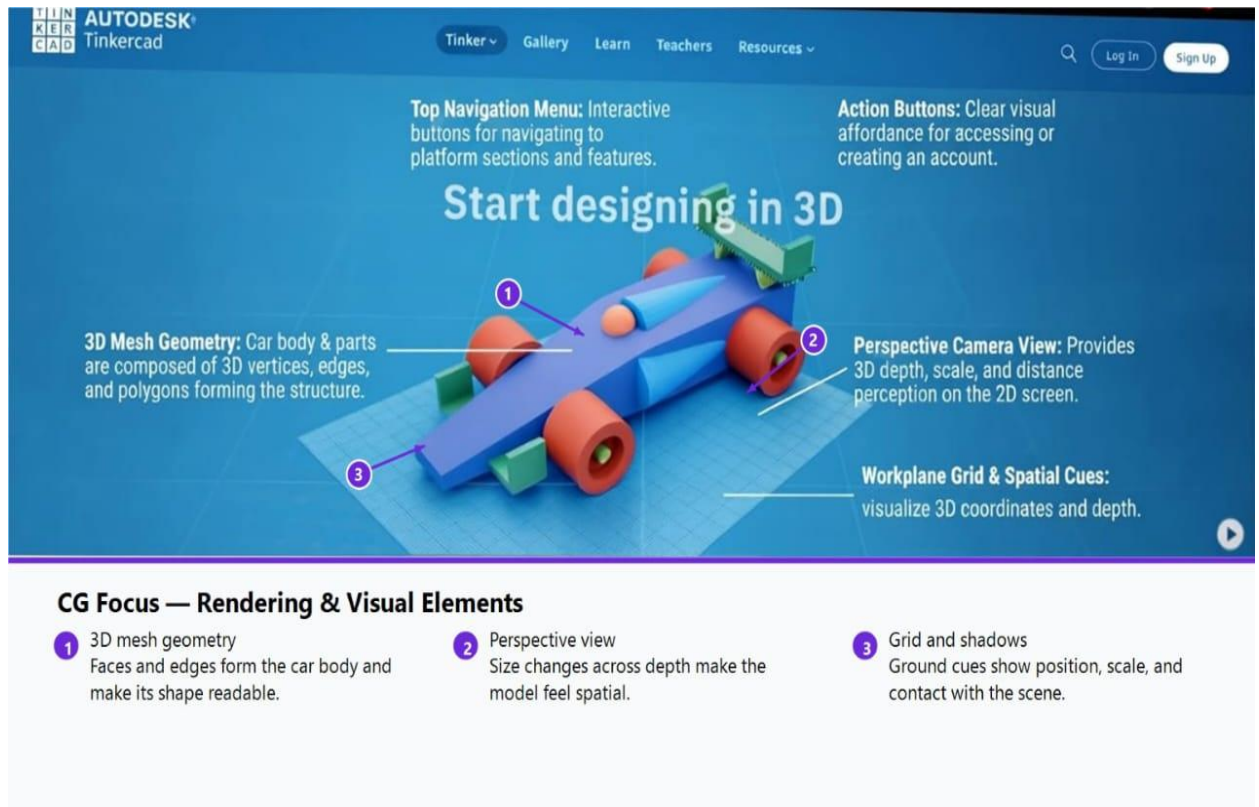

ASSIGNED BY : SIR RAJESH KUMAR

ASSIGNMENT NO : 1

The screenshot shows the Autodesk Tinkercad website interface. The top navigation bar includes links for Tinker, Gallery, Learn, Teachers, and Resources. On the right, there are 'Log In' and 'Sign Up' buttons. The main content area features a 3D model of a car on a grid, with the text 'Start designing in 3D'. Annotations with numbered circles point to specific UI elements: 1 points to the top navigation menu, 2 points to the 'Sign Up' button, and 3 points to a search icon. Text boxes provide descriptions for these elements and other UI features like 3D mesh geometry, perspective camera view, and workplane grid.

HCI Focus — Interaction Elements

- 1 Main menu**
Groups sections clearly, so users can navigate quickly.
- 2 Sign Up button**
A strong visual affordance makes the next action obvious.
- 3 Search icon**
A familiar symbol lets users find content directly.

Reflection Questions

Q1. How does the Computer Graphics quality help or hinder the user's ability to interact?

The 3D graphics make the objects easier to understand because perspective, shadows, and the grid show their size, position, and depth. This helps users see how objects are placed in the 3D workspace and makes designing more intuitive. However, too many visual details could sometimes distract the user from the important controls and tools.

Q2. What is one simple HCI change you would make to improve the user interface?

I would make the most commonly used navigation and view controls larger and easier to find. This would help new users move, rotate, and zoom around the 3D workspace more easily. It would make the software feel simpler, friendlier, and more comfortable to use.
